

Performance Testing

Date	29 September 2026
Team ID	TBD
Project Name	PocketSmart AI
Maximum Marks	2 Marks

Testing Scope

Performance testing for the current student project focuses on API responsiveness, dashboard loading, database operations and optional AI latency. Exact benchmark values should be measured in the final deployment environment.

Test Area	Test Scenario	Expected Result	Current Assessment
Login API	Valid credentials	Successful response and token	Pass by implementation review
Expense API	Create and retrieve transactions	Correct JSON response and persistence	Pass by implementation review
Dashboard Load	Load summary, expenses, goals and recommendations	Data loads asynchronously	Pass by implementation review
Database	Insert and query user finance records	Consistent stored data	Pass by implementation review
Rate Limiting	Exceed configured request window	HTTP 429 returned	Implemented
Security Headers	Inspect HTTP response headers	Expected protective headers present	Implemented
AI API	Gemini configured and reachable	Recommendation/OCR response	Environment dependent
CSV Export	Export transactions	Valid CSV download	Implemented

Recommended final measurements

Record average response time, p95 response time, dashboard load time and concurrent-user behavior before final submission. These numbers depend on the machine/network and should not be fabricated.
