

Coding & Solution

Date	29 September 2026
Team ID	TBD
Project Name	PocketSmart AI
Maximum Marks	4 Marks

Implementation Summary

The submitted implementation is a Flask web application. The backend provides authentication, expense, budget, goal, analytics, AI recommendation and CSV endpoints. The frontend consumes these APIs and renders a responsive financial dashboard.

Component	Implemented Details
app.py	Flask application, database initialization, JWT auth, password hashing, security headers, rate limiter and finance APIs.
templates/index.html	Authentication screen and application dashboard markup.
static/app.js	API requests, authentication state, theme switching, dashboard rendering, charts and user interactions.
static/style.css	Responsive visual design, dark/light themes and dashboard components.
spend_guide.db	SQLite persistence for users, expenses, budgets and goals.
requirements.txt	Flask and Google GenAI dependency; optional PostgreSQL dependency documented.

Run command

```
python app.py
```

The application is intended to be opened at <http://localhost:5000> after dependencies and required environment configuration are set.
